- Track and Field, Athlete, Lawrenceville, GA, August 2009-May 2012

Chosen Topic

Our project is a program that will run behind a 2-way mirror to create the feel of a Smart Mirror. The mirror will display many features including a clock, up-to-date weather, news, stock, and many others. We will get the data from various online API's. The Smart Mirror will have a motion sensor that will detect motion in the room and display the screen when a person is in range. The weather display will show the current temperature, forecasted temperature, sunrise and sunset times, and weather conditions. The news display will show various news sources hot headlines.
